**Tungsten Carbide Gritted Blades, Files, & Grout Rakes** overall, make possible many cutting and filing jobs which had previously been beyond the capacity of home improvement and industrial users. They have considerable advantages over conventional blades and tools:

- They will cut and file on both forward and backward stroke.
- Their strong flexible back makes them virtually unbreakable.

Blades will fit all standard frames and most standard power tools.

The **ARTU**® Blades, Files, and Grout Rakes are edged with thousands of particles of tungsten carbide, one of the hardest materials in existence. With no teeth to dull or break, these tools cut cleaner through a wide variety of materials.
