HOLE SAWS

Tungsten Carbide Gritted

A Revolutionary New Hole Saw Concept By ARTU®

Cuts through the most difficult materials with ease, i.e.:

- Ceramic Tile
- Concrete Block
- Cement Backerboard
- Brick
- Fiberglass
- Plexiglass
- PVC
- Wood with nails
- Cultured Marble
- Dry Wall

Perfect for abrasive construction materials.

ARTU®'s Tungsten Carbide Gritted Hole Saws are designed and manufactured with the highest and newest technology in the industry today. This incredible hole saw will last longer and cut faster than conventional hole saws. The unique design of this hole saw enables it to cut through materials that other hole saws will barely scratch.

The **ARTU®** hole saw is easy to use and cuts with precision. Why? It never dulls. Tough Tungsten Carbide particles replace standard teeth on conventional hole saws. These tough particles are self-sharpening, so when a particle chips, a new sharp surface is created in its place.

The **ARTU®** Tungsten Carbide Gritted Hole Saw's remarkable design enables you to use the same pilot bit and large bayonet mandrel for every hole saw size, saving you both time and money!

The Tungsten Carbide Gritted Hole Saw by **ARTU®** is the perfect tool for everyone from the construction trades to the do-it-yourselfer.

ADVANTAGES

- ✓ Self Sharpening
- ✓ 2¼" Cutting Depth
- ✓ Long Cutting Life
- ✓ Designed to be used with any variable speed hand drill
- ✓ Mandrel design allows for easy removal of cut material plug.
- ✓ For the builder, tile setter, home owner, do-it-yourselfer, construction worker and other professionals
- ✓ The **ARTU®** Tungsten Carbide Gritted Hole Saws and accessories are available in individual sizes and sets
